a
Per-world law differs
$1-\frac{1}{2}\ln\frac{\pi}{2}\approx 0.774$ (ST-T273 upper edge)
ST-T273 sandwich, valid for every n
$\frac{1}{2}\ln\frac{2e}{\pi}=0.274$ (ST-T274)
$q=1/10$
$q=1/4$
$q=1/2$
$q=0$
$-\frac{1}{2}\ln\pi$ (boundary $q\in\{0,1\}$)
$-\ln 2$ (ST-T271 lower edge)
$\mathbb{E}_q[\ln \mathrm{BF}_n]-n\,\mathrm{KL}(q\|\frac{1}{2})+\frac{1}{2}\ln n$
trials n
b
Only world weights differ
binary latent
two identical components
different kernels
ST-T280 bound
$\to 2.97$ at $T=256$
cap KL$(a\|b)$ $=0.549$
cap 0.366
merged 0.243
$\mathrm{KL}(P_a^Y\|\,P_b^Y)$ (nats)
transcript length T (one world draw)
