(a) columns of W and the rotated cones
rotate by θ_+: w_3 reaches the axis
$s = \sqrt{\pi}$
dots: $u = Os$, $\pi' = u \circ u$
w_3
w_2
w_1
rotate by θ_-: w_1 reaches the axis
coordinate 2 (latent 2)
coordinate 1 (latent 1) of $W = D_{\sqrt{\pi}} K$

(b) prior weight along the admissible arc
$\pi'_1(\theta) = \cos^2(\psi + \theta)$
exact fiber models ($\tan\frac{\theta}{2} \in \frac{1}{200}\mathbb{Z}$)
true model, $\pi_1 = 9/25$
ST-M87 witness, $K' > 0$
$L = 1 - q_{y^*}^2 / T_{y^*y^*} = 144/1825$
outcome 3 anchors latent 2
$U = q_{x^*}^2 / T_{x^*x^*} = 1849/2425$
outcome 1 anchors latent 1
weight π'_1 of the fiber model
rotation angle θ (degrees)
